PROJECTS

Recipe Tadka

Personalized Food Recipe Recommender App

As a Flutter Developer, I successfully developed a mobile app that integrates Firebase services for user authentication, data storage, and backend functionality. I designed a user-friendly interface featuring various components, including onboarding, a recipe feed, search, and filtering options, to enhance user experience. Additionally, I utilized a third-party API for recipe data and implemented machine learning algorithms to deliver personalized recipe recommendations. This project allowed me to demonstrate my skills in Flutter development, API integration, Firebase services, UI/UX design, and backend development.

MSBTE Diploma

Notes Provider App

As a Flutter Developer, I developed the MSBTE Diploma App using Firestore for the backend, enabling real-time data synchronization and efficient data management. I designed an intuitive user interface that includes features such as personalized course recommendations, offline access to resources, and streamlined navigation. My work involved integrating various APIs and implementing user authentication to enhance security and user experience. This project allowed me to demonstrate my skills in Flutter development, Firestore, UI/UX design, and API integration, while also ensuring a responsive and engaging application for users.
